**Subject:** Development of Passive Deposition (i.e., Rainfall) Sampler

Hi Dana and Rick:

I have done a little background work on the modification of the rain sampler. The most promising option I have seen is a 350mm I.D. polypropylene carboy/drum funnel. I have ordered one funnel to test at our laboratory. I have been told that polypropylene doesn't contain DEHP, but I don't know what other chemicals might be in there.

There are other options for the rain collector, but if this one works it would make things a lot easier.

Let me know if you have any questions.

- Bruce
